

COMMANDPRO®

CommandPro®

CommandPro® was developed by the world's most experienced and knowledgeable emergency preparedness teams. The software is most noted for its universal access and complete integration. This affords organizations the ability to respond faster and with greater resource control.

Web-Based Incident Management

CommandPro® is a web-based incident management software that streamlines command and control processes. The system automates the generation of National Incident Management System (NIMS)-compliant documentation in support of Incident Command System (ICS) compliance, and provides an automated ICS teaching tool that facilitates drill planning and exercise documentation.

Incident Command Structure

CommandPro® enables creation of the incident organization structure. This tool provides clients the capability to add names and contact information. When changes have been identified to a defined command structure, it is easy to reflect such changes and make it available geographically.

Key Features

- Automated 201, 215, and incident briefing forms
- Enhanced organizational chart wizard
- Incident summary dashboard
- Incident tracking – new and historical
- Planning “P” interface
- Incident Action Plan (IAP)
- Resource tracking
- Virtual status board
- Incident wall
- Document management tools
- GIS integration

WITT | O'BRIEN'S

Created by responders, for responders, CommandPro® gives your team the ability to respond faster and more efficiently.

Integrating command strategy and tactics with the ICS process and documentation, CommandPro® combines decades of field experience with the latest software technology. This software delivers the tools you need to automate ICS while facilitating a proactive transfer of information.

CommandPro® enables creation of the incident organization structure. This tool provides clients the capability to add names and contact information. When changes have been identified to a defined command structure, it is easy to reflect such changes and make it available geographically.

Using the familiar Planning “P” as a simple but powerful interface, CommandPro® guides responders with basic ICS training through the NIMS ICS planning process of meetings and forms.

- Systematic approach to Incident Action Plan (IAP)
- Collaborate efficiently between unified command
- Produce NIMS-compliant documentation
- Automate ICS form generation
- Facilitate resources assignment and tracking
